SONDAGGIO

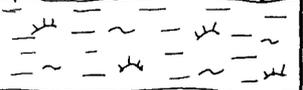

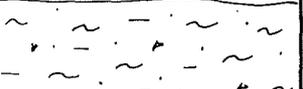

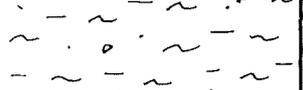

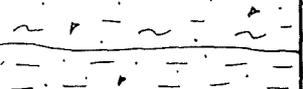

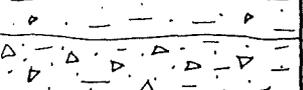

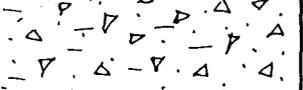

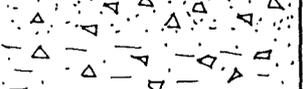

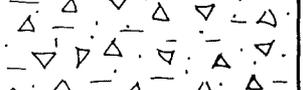

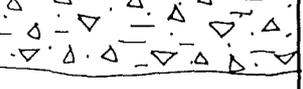

no 1

LOCALIZZAZIONE

Vescia - Foligno

DATA

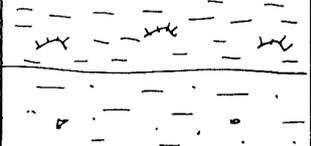

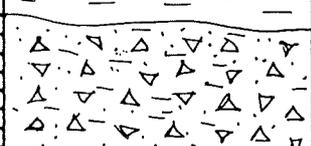

20/6/83

metri	colonna stratigrafica	falda	descrizione
0,00			Terreno vegetale limo-argilloso
0,50			Limi argillosi e sabbiosi debolmente ghiaiosi ($2 < q_u < 4 \text{ Kg/cm}^2$) di colore giallastro.
1,00			argille sabbioso-ghiaiose molto compatte di colore marrone ($q_u = 3,9 \text{ kg/cm}^2$).
1,50			
2,00			
2,50			
3,00			Breccia sciolta costituita da ghiaie prevalentemente calcaree eterometriche in debole matrice argilloso-sabbiosa; localmente la matrice é sabbiosa gros-solana.

LOCALIZZAZIONE

Vescia - Foligno

DATA

21/6/83

metri	colonna stratigrafica	falda	descrizione
0,00			Terreno vegetale prevalentemente limo-argil-
			loso.
1,0			Limi argillosi giallastri subordinatamente
			sabbiosi, con calcinoli e noduli travertini
			si, che passano ad argille limose marroni.
2,0			La consistenza del deposito è molto compat-
			ta ($qu \geq 3,5 \text{ Kg/cm}^2$).
3,0			
			Breccia sciolta costituita da ghiaie pre-
			valentemente calcaree eterometriche in ma-
			trice argilloso-sabbiosa.
4,0			limi argillosi debolmente sabbiosi ($qu \geq 2,6$)
			Breccia sciolta.....
			Breccia sciolta.....
			Breccia sciolta.....
5,0			Sabbia argillosa umida e argille sabbiose
			$qu \geq 1 \text{ Kg/cm}^2$).
			Breccia sciolta.....
			Breccia sciolta.....
			Breccia sciolta.....
6,0			Breccia sciolta.....
			Breccia sciolta.....
			Breccia sciolta.....
			Breccia sciolta.....
			Breccia sciolta.....
7,0			Sabbia media e grossolana umida, con
			contenuto variabile di argilla, alterna-
			ta ad argille sabbiose.
			Breccia sciolta
